Overview

The Extreme Networks Summit X430 series Gigabit Ethernet standalone switches provide network edge connectivity for enterprises, branch offices, and small and medium-sized businesses. Summit X430 series are available in 28- or 52-port 10/100/1000 Mpps port models 8 or 24 port 10/100/1000 Mpps IEEE 802.3at PoE models and are ideal for network convergence of Unified Communications, wireless mobility, streaming media and multicast traffic on a single open fabric edge network.

The Summit X430 leverages a compact 1RU and 10-inch deep form factor, along with a low volume operating mode that makes it ideal for open office and wiring closet environments. Summit X430 series switches support up to 4 fixed front panel 100/1000BASE-X (SFP) unpopulated ports (two SFP ports on the 8 port PoE+ switch) that can be utilized for high-speed backbone or link aggregation connections between wiring closets.

Summit X430 series simplifies network operation by using the ExtremeXOS, a modular operating system (OS) that spans all Extreme Networks Summit and BlackDiamond Ethernet switches. Powered by ExtremeXOS, the Summit X430 series enables organizations to build highly resilient and secure edge networks that support high network uptime, simplified management, increased operational efficiency with low total cost of ownership.

The Summit X430 provides exceptional Policy-based QoS with advanced traffic management for converged applications. With eight hardware queues per port to support granular (8kbps-1Mbps) traffic classification, the Summit X430 provides flexible yet reliable solution for converged data, voice & video traffic.
